10 pt

Race strategy begins long before the lights go out. Engineers study tyre wear, fuel loads and weather models to choose the ideal number of pit stops. During the race, live telemetry streams from hundreds of sensors on the car to the pit wall. A single tenth of a second gained in the pit lane can decide the result. When a safety car appears, teams must react within seconds, weighing track position against fresh tyres and the risk of traffic in the closing laps. It is a sport of millimetres and milliseconds. Drivers trust their engineers as much as their instincts.

Since 2015 she has served on the board of a regional management institute, supporting education and community programmes. Her professional work also includes advisory roles within agricultural associations and local industry.

10 pt

Modern racing cars are shaped as much by air as by engines. Front wings, floors and diffusers work together to press the car into the track, allowing higher cornering speeds. Too much downforce, however, creates drag on the straights. Designers spend thousands of hours in wind tunnels and simulations searching for the right balance. A small change to a winglet can alter the airflow over the entire car, so every new part is tested on track before it races. Weather can change everything in a single lap. The fastest teams are also the most reliable.

20 pt

Electric racing cars follow detailed regulations covering charging, practice sessions and competition. Their tyres, battery systems and aerodynamic surfaces are designed to balance performance and reliability on urban circuits.

10 pt

Street circuits turn ordinary city roads into a high speed challenge. Barriers sit inches from the racing line and there is little room for error. Drivers memorise every bump, kerb and painted line before the first practice session. Under floodlights the track cools down, changing how the tyres behave as the evening goes on. Overtaking is difficult, so qualifying becomes crucial, and a clean start can be worth more than raw pace over the full race distance. Weather can change everything in a single lap. It is a sport of millimetres and milliseconds.

After several years at a luxury car manufacturer, the designer joined a larger company to develop a new range of family saloons. Later interviews described how studio leadership and public presentation influenced the final appearance.

10 pt

Rally stages test both car and crew on gravel, snow and tarmac. The co-driver reads pace notes aloud, describing each corner, crest and jump in a precise shorthand. Trust between the two is absolute, because the driver often commits to a bend before seeing it. Mechanics have only a few minutes to repair damage between stages. Over a long weekend, consistency usually beats outright speed, and a single puncture can undo days of careful driving. The pit wall watches every corner. Drivers trust their engineers as much as their instincts.

10 pt

Endurance racing asks teams to run for twenty-four hours without losing focus. Three drivers share each car, swapping places every few hours while engineers monitor fuel, brakes and lap times. Night stints are the hardest, with tired eyes and slower traffic appearing suddenly in the headlights. Reliability matters as much as speed, so every component is built to survive constant stress. When the chequered flag falls, the winners have often covered more than five thousand kilometres. Nothing is decided until the final lap.

The school was designed with reinforced concrete walls and a protective outer structure. Its construction combined classrooms with sheltered interior spaces to meet the practical requirements of the project.

10 pt

Marathon training is built on patience. Runners slowly increase their weekly distance, mixing long easy runs with shorter intervals at race pace. Nutrition and sleep become part of the plan, because recovery is where the body grows stronger. On race day, the first kilometres feel effortless and many athletes start too fast. The real test arrives after thirty kilometres, when energy runs low and only careful pacing keeps the finish line within reach. The crowd remembers the brave.

Some emeralds display a distinctive radial pattern, with dark inclusions dividing the green crystal into six sectors. Similar structures can also appear in other minerals, creating remarkable natural forms.

10 pt

Football tactics have changed a great deal over the past few decades. Teams now press high up the pitch, trying to win the ball close to the opposing goal. Full backs push forward to support attacks, while midfielders cover the space they leave behind. Coaches study match data to understand passing patterns and running distances. Even so, the game still rewards instinct, and one moment of creativity can break down the most organised defence. Rest is part of the training plan.

10 pt

Basketball analytics has reshaped how teams build their rosters. Shot charts show that three point attempts and shots near the rim are more efficient than long twos. Tracking cameras record every movement on the court, measuring speed, spacing and defensive effort. Coaches combine these numbers with video sessions to prepare for each opponent. Players still need confidence and timing, but data now helps decide who takes the final shot. Rest is part of the training plan.

Tennis rewards players who can solve problems under pressure. Each point begins with a serve, and the best servers combine speed with precise placement. Rallies become a contest of angles, spin and footwork as both players search for an opening. Between points there is time to think, which makes the mental side of the game unusually important. Every athlete has a routine before the start. Champions are built in training, not on match day.

About the font

Gantrix is a square sans serif system that sits between futuristic form and functional design. Its joints, usually key to letter recognition, have been removed and replaced with hybrid forms that add personality, especially in the lighter weights. In characters with a middle joint, such as 8, 3 and 8, this detail pushes the limits of recognition. Seven widths and seven weights let designers fine-tune tone and expression while keeping a consistent appearance, from light, narrow and elegant styles to heavy, wide and boxy ones. Closer to contemporary sci-fi than to retro futurism, it suits sport, automotive graphics, video games, fashion, beauty or UI design. Gantrix comes in 50 styles, including a variable font.

Languages

Gantrix supports more than 290 Latin-script languages, including Afrikaans, Albanian, Basque, Bosnian, Breton, Catalan, Corsican, Croatian, Czech, Danish, Dutch, English, Esperanto, Estonian, Faroese, Filipino, Finnish, French, Galician, German, Hungarian, Icelandic, Indonesian, Irish, Italian, Javanese, Kurdish, Latin, Latvian, Lithuanian, Luxembourgish, Malagasy, Malay, Maltese, Maori, Montenegrin, Norwegian, Occitan, Polish, Portuguese, Quechua, Romanian, Romansh, Sardinian, Scottish Gaelic, Serbian [Latin], Slovak, Slovenian, Somali, Spanish, Swahili, Swedish, Tagalog, Turkish, Turkmen, Welsh, Wolof and Zulu.

Licenses

Desktop For use on a desktop computer. Including the most common print uses, both personal and commercial. For its use in applications such as Adobe Creative Suite, Sketch, Microsoft Office, etc. Desktop licenses are based on the number of computers in which the font will be installed.

Webfont For a website or web application. A webfont license allows to embed the font into a website, so that it can be displayed on any browser. The license is based on a monthly pageviews allowance for the webfonts. One time fee, this license does not need to be renewed if the site remains within that monthly pageviews.

Digital Ads For use in dynamic and responsive HTML5 ads or other digitally embedded ads. You can use on social media campaigns as well, keeping the brand identity wherever the ad appears.

App-ePub For mobile apps and electronic publications. The license allows to embed the font in the mobile application's code and in an electronic publication such as digital books, magazines, newspapers. Licenses are based on the total number of downloads of the app or the ePub.

Logotype For the use of the fonts in a logo, brand mark, tagline, baseline, slogan, or any artwork that may be trademarked or registered. The license allows converting or outlining the fonts to create a static logo design for branding purposes. Licenses are based on the total number of employees of the company using the logo. Logotype EULA

Corporate license A perpetual combination of all our licenses: Desktop, Webfont, Digital Ads, App-ePub and Logotype. Tailored for a single brand or entity, based on the total number of employees within the organization (not the number of users or computers) at the time of purchase. This license does not need to be upgraded if the company grows in the future. You can buy it directly online up to 1000 employees.

Additional license types available upon request.
